

Advanced Power in Three Applications: Motion Control, Measurement Control, and High-speed Response Control

The All New FQM (Flexible Quick Motion)[®]

The FQM1 now supports I/O expansion, communications slaves, multi-axis control, data storage, and function block /structured text programming.

Flexibility, quickness, and a wide range of advanced motion operations enable the FQM1 to easily handle applications in the following three control areas.

1 Motion Control

2 Measurement Control

3 High-speed Response Control

The all new FQM1-CM002/MMA22/MMMP22 (FQM1-series unit version 3.0) can be expanded using C-J-series Units. In addition, function block and structured text programming are supported.

Motion Control

Function Block and Structured Text Programming

I/O Control Module

C-J-series Units can be added.

Measurement Control

High-speed Response Control

Motion

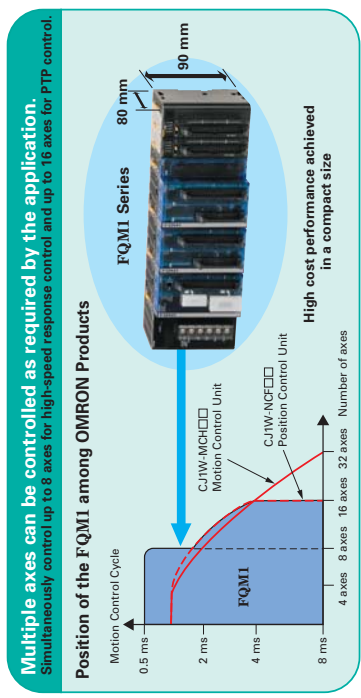

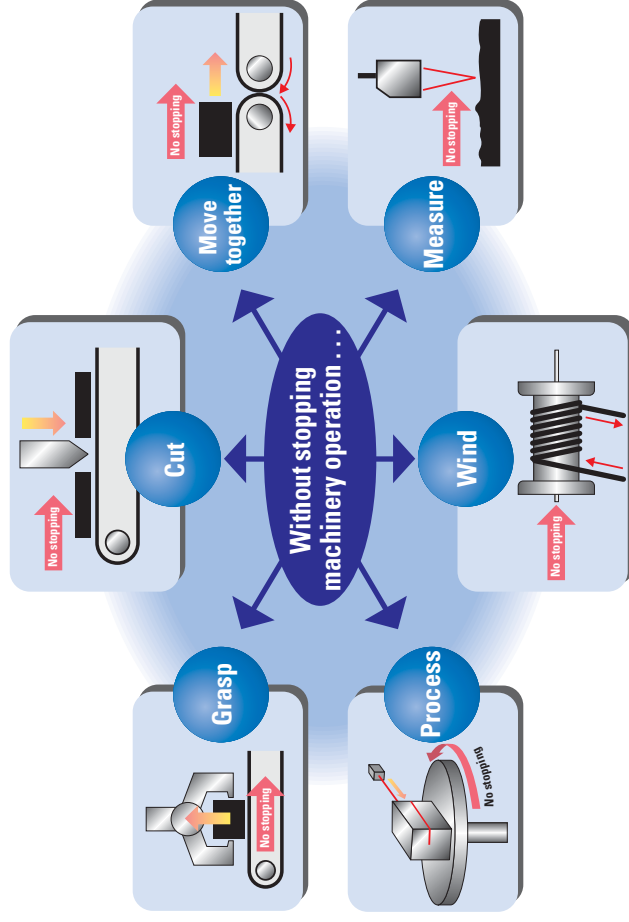

Wide Range of Advanced Motions

Flexible

Quick

For the Non-stop Control Ideal for Applications Performing Processing without Stopping Machinery Operation

To improve machinery performance, it is important to increase productivity by eliminating waste. Here, the FQM1 really performs to enable processing must be achieved without stopping machinery operation.

A Variety of Applications Accomplished with Motion, Measurement, and High-speed Response

High-level Wide-ranging Motion Achieved from F (Flexibility) and Q (Quickness).

- From High-speed PTP Control to Synchronous, Torque, and Tension Control Pulse/analog I/O feedback gives the FQMI power in high-speed I/O applications.

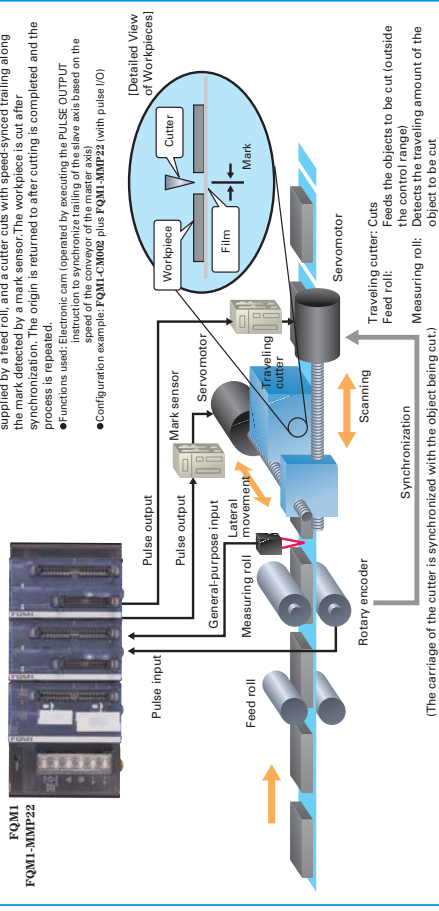

- **Wide-ranging FQMI Applications** In addition to motion control, the FQMI handles the following control areas through its ability to perform high-speed I/O processing through feedback from analog or pulse input data. Actual applications have already been implemented.

Control Category	Application example	
Motion control	Rotary cutters	
	Packaging machines	
	Synchronous control	Traveling cutters
	Flying cutters	
	Electronic cams	Processing line and lens processing
	Tension control	Winding and feeding
	Line control	Paper feeding
	Draw control	Injection molding
	Torque control	Molding and pressing
	Torque limit	Processing and coating
Tracking control	CP control	
	Traverse control	
	High-speed analog sampling	
	Sheet thickness inspection and quality management	
Analog systems	High-speed PID control	
	Distance constant control	
Pulse systems	High-speed counters	
	Measurement (high-speed) and FV conversion	
I/O control	Synchronous startup	
	Conveyors	
	Interrupt feeding	
	Labels	
	High-speed PTP control	
High-speed response control	Conveyors	
	Conveyors	

Motion Control Applications

The FQMI Achieves High-precision Trailing Using High-speed Control Cycles

High-precision trailing with little fluctuation is possible due to the high-speed responsiveness of the FQMI. An instruction for line segment approximation can be used during operation to change the pattern of the curve.

The high-speed cycle and processing method of the FQMI enable flexible cam patterns.

The high-speed cycle and high level of processing functions enable synchronous control of electronic cams using either a cam table method or a data processing method. In particular, when the data processing method is used, it is possible to realize a high-speed control cycle during processing, enabling the cam to be changed during operation. When using the cam table method, tables can be linked and used even while switching cam tables, enabling high-resolution curves.

The High-speed Control Cycle and Processing Power of the FQMI Expand the Range of Synchronous Control.

A high-speed control cycle and high-performance processing power enable synchronous control of the electronic cam, thereby enabling processing without stopping the line.

Application Examples

- For example, printing can be performed on items flowing along the line without stopping by rotating the printing drum synchronized with the line speed.
- Functions used: Synchronous control of the electronic cam, high-speed
- Configuration example: FQMI-CM002 plus FQMI-MMP22 (with pulse I/O)

Process without stopping

Use the FQMI Synchronized Data Function to Enable Synchronized Compensation Control

With the FQMI, the data held by the Motion Control Modules can be shared by using a sync bus. Analog data shared in this way can be used as compensation for position control.

Application Examples

- Process by maintaining a uniform distance from products that warp during processing
 - Feed control for parallel conveyors
- For example, while the base hoist axis synchronized to the table position is controlled with pulse input data by the FQMI-MMP22, analog input data, such as that from a displacement sensor, can be obtained via a sync bus from the FQMI-MMA22 and used to compensate the hoist axis control.
- Functions used: Sync data function (with pulse I/O)
 - Configuration example: FQMI-MMA22 (with analog I/O) plus FQMI-MMP22 (with pulse I/O)

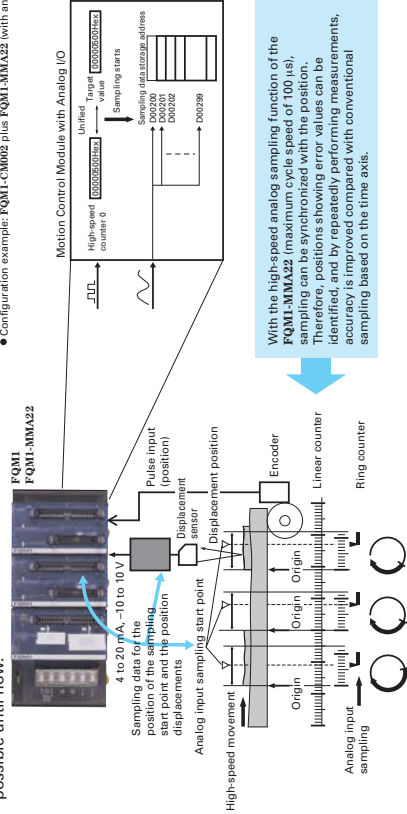

Conveyer stoppage

Measurement Control Applications

High-speed Analog Sampling Synced on an FQMI Pulse Input

The FQMI-MMA22 has a high-speed sampling and storage function for analog input data that is synced with input pulses (i.e., the position of the target object). This achieves sampling performance beyond that achieved with conventional controllers, and also supports sampling in sync with an external signal, whereas only sampling over specified times was possible until now.

Measure without stopping

Application Examples

- Quality analysis by detecting warping or other conditions of minutely processed products
 - Condition data collection during processes
- For example, by collecting multipoint displacement data over the course of changes in the position of the target object from one position to another, the warping or other conditions of minutely processed products can be detected and quality analyzed.
- Functions used: High-speed analog sampling
 - Configuration example: FQMI-CM002 plus FQMI-MMA22 (with analog I/O)

With the high-speed analog sampling function of the FQMI-MMA22 (maximum cycle speed of 100 μs), sampling can be synchronized with the position. Therefore, positions showing error values can be identified, and by repeatedly performing measurements, accuracy is improved compared with conventional sampling based on the time axis.

High-speed Response Control Applications

Flexible Speed Control with Freely Controlled Pulse Outputs

With the renewed FQMI, the freedom in speed control has been greatly increased by using pulse outputs. In the operation of infinite-axis feeding, the rotation speed can be changed by changing the frequency of the pulse output as desired based on the time axis.

Application Examples

- Speed Control for infinite-axis Feeding
- For example, the ideal rotational operation can be performed for the speed of a rotating body by changing the speed or acceleration/deceleration as desired over time.
- Functions used: ACC instruction (ACCELERATION CONTROL)
 - Configuration example: FQMI-CM002 plus FQMI-MMP22 (with pulse I/O)

For the Optimal Control Customers Demand for Their Machines Flexible

Each Module Controls I/O Directly

The FQMI distributes control to each Module, and each Module controls I/O directly. The Motion Control Modules and Coordinator Module independently execute their own ladder programming, enabling independent, high-speed processing of analog and or pulse I/O controls.

Synchronize Up to Eight Axes

With the FQMI, each Motion Control Module can control two axes. If you mount four Modules, synchronous control can be performed for up to eight axes.

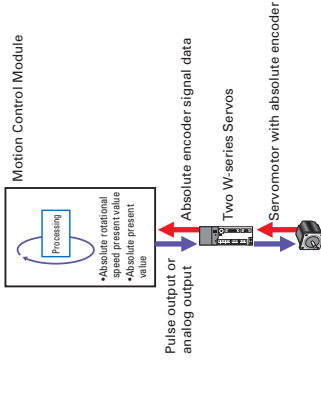

Up to Eight Axes Can Be Synchronized (Processing Cycles of All Modules Are Synchronized)

Compatible with Absolute Encoders

A Servo Driver with an absolute encoder can be connected to the FQMI.

Servo Drivers with Absolute Encoders Can Be Used.

Detailed Programming of Motion Control

With the FQMI, each Module contains a user ladder program, enabling programming detailed operations that conventionally could not be implemented by the comparatively conservative processing of specialized motion languages.

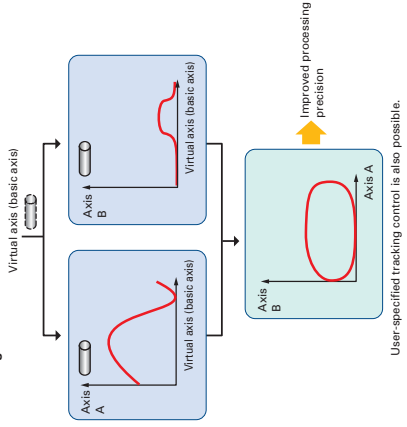

Support for Highly Flexible Programming, such as Control Mode Switching, Operating Condition Changes during Operation, etc.

Ideal Flexible Electronic Cam Operation

Tracking Pattern Generation

Each Module Controls I/O Directly

The FQMI distributes control to each Module, and each Module controls I/O directly. The Motion Control Modules and Coordinator Module independently execute their own ladder programming, enabling independent, high-speed processing of analog and or pulse I/O controls.

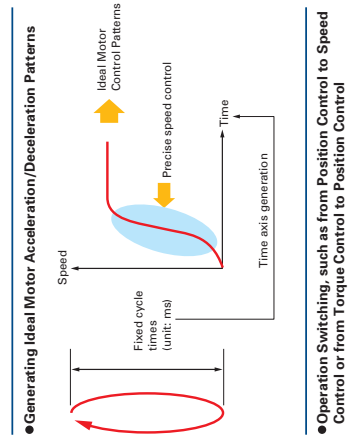

Sync Data Shared between Modules

With the FQMI, each Module can broadcast any two types of data as shared data. Data, such as present values of high-speed counters, analog input values, and virtual axes, can be shared between Modules, enabling a wide variety of synchronized control.

Pulse and Analog I/O Values Can Be Synchronized and Shared

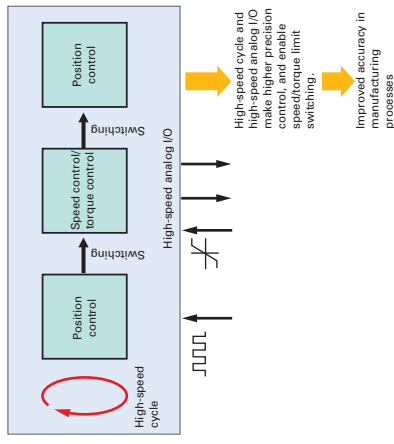

Note: The following types of information can be shared between Modules: Ladder processing results, high-speed counter present values, pulse output present values, analog input values, analog output values, and built-in input values.

Generating Ideal Motor Acceleration/Deceleration Patterns

Operation Switching, such as from Position Control to Speed Control or from Torque Control to Position Control

For the Optimal Response Demanded from Your Machines Quick

Parallel Distributed Processing System

Stable Motion Control Cycles for 2 to 8 Axes
 With the FQMI, the Coordinator Module and each Motion Control Module have its own application program (ladder diagram). The Coordinator Module processes communications services with peripherals, such as computers and PTs. This enables each Motion Control Module to concentrate on its processing exclusively, as a closed unit, resulting in high-speed motion control cycles of 0.5 to 2 ms (overhead time in cycle time is 0.19 ms min.). Also, even if the number of control axes increases, control is distributed and executed at each Module so that the same stable motion control cycles can be achieved as for only a few control axes.

Control Cycles Synced between Axes
 The FQMI has a sync bus running between the Modules so that control can be carried out in the same control cycle (Coordinator Module cycle, or specified cycle time between 0.5 and 10.0 ms) while data, e.g., for virtual axes and real axes, is shared among all Motion Control Modules. By making the control cycle of the Coordinator Module constant, it also becomes possible to make the control cycles of the Motion Control Modules constant. Control cycles can be synchronized and made constant.

High-Speed Processing Performance

High-speed Cyclic Processing Engine Directly Controls Built-in Pulse/Analog I/O
 Each FQMI Motion Control Module has built-in I/O. Therefore each Motion Control Module can perform I/O processing directly as a self-contained unit. Also, the I/O interfaces are designed specifically for speed to enable the following high-speed I/O.

● **Input Interrupt** Interrupt response: approx. 70 µs (Not including hardware response time)

High-Speed Analog I/O

Capturing High-speed Counter Present Value with Hardware Latch

-Latch input response: 30 µs
 -Reading captured present value of high-speed counter: Control cycle

Higher-Frequency Pulse I/O

To support applications demanding high precision, the FQMI has increased the frequencies for pulse I/O.

- Pulse input: 500 kHz (phase difference with multiple of 4: 2 MHz)
- Pulse output: Maximum output frequency of 1 MHz

Program Development Environment is as easy for Application program development as for a PLC.

Connect the CX-Programmer Support Software to the Coordinator Module to create and monitor programs for all Modules. While monitoring the ladder programs in Motion Control Modules, it is possible to input operation conditions for monitoring the I/O of the Coordinator Module, and to debug programs.

Ladder programs for the Coordinator Module and all Motion Control Modules can be created, transferred, and monitored.

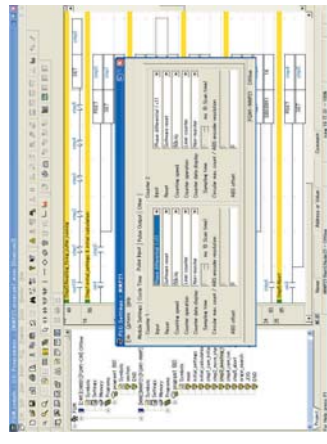

Manage the FQMI Module Configuration on a Directory Tree on the Support Software.

Note: Use CX-Programmer version 6.11 or higher with the FQMI.

Set the Module Operations on the System Setup Window

System Setup, such as the FQMI synchronous/asynchronous mode setting, to determine the FQMI operation programs are required along with creating application programs and can be selected in special windows.

Function Block (Ladder Programming and ST Language) Support Further Improve Development Efficiency and Maintenance.

Calculation processing can be written with Structured Text

Efficiency of development and maintenance is increased for motion control applications with a lot of calculation processing.

Connecting Peripherals

Serial communications systems can be constructed with the host PC.

- Host Links with CS/CJ-series PLCs
- Serial PLC Links with CJ1M PLCs

Serial Communications with the Host PLC
FQMI data can be read and written using communications instructions from the host PLC.

■ **Equipped with Host Link Functions as Standard Feature: Coordinator Module**

By mounting a Serial Communications Unit (of Unit version 1.2 or later) to a CS/CJ-series PLC, accessed data can be read and written for the FQMI using the SEND/RECV network communications instructions with the CS/CJ-series PLC as the Host Link master and the FQMI as the Host Link slave (using the RS-232C port on the Coordinator Module).

Seamless Data Exchange with Host Controllers

■ **Serial PLC Links Supported**

(Data Sharing with the OMRON CJ1M PLC)
 Exchange of control data with the machine's main controller (PLC) can be performed without any special programming. With the CJ1M CPU Unit as master and the FQMI as slave, data can be exchanged between the two without special programming. Connect the FQMI Coordinator Module to the RS-232C port.

Note 1: The master-link method and complete link method for Serial PLC Links are RS-422A converter (CJ1W-CJF11).

Note 2: When connecting 1:N (where N = 8 units max.) via RS-422A/485, use an RS-422A/485 to RS-232C conversion).

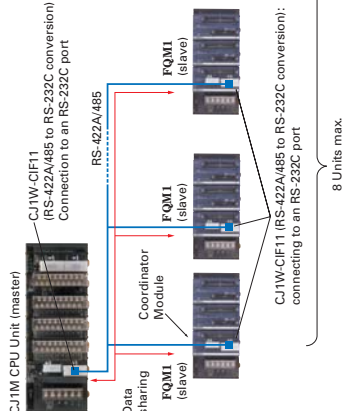

The maximum size of each CJ1M/FQMI transmission is ten words. Transmissions smaller than ten words (unified CJ1M/FQMI size) can also be sent (set as the number of link words).

● **System Configuration**

- CJ1M:FQMI = 1:1 Connection

• CJ1M:FQMI = 1:N (8 Max.) Connection

Reference information: In the complete link method, the CJ1M CPU Unit will be the master and data transfer will be possible among the FQMI slaves.

Connecting Peripherals

Construct Touch Panel (PT) Systems and DeviceNet Systems.

- NS-series PTs supported.
- DeviceNet supported.

Serial Communications with NS-series PTs

Easy Servo Parameter Setup/Monitoring from NS-series PTs

■ **Serial Gateway Function**

(Built-in RS-422A for Connecting to Servo)
 Servo parameters and other data can be read or written from an NS-series PT or computer (application running on the CX-Server) via the FQMI Coordinator Module for servo drivers connected by RS-422A. This makes it easy to enter servo driver parameter settings at system startup, and to monitor operation.

● **RS-422A-compatible Servo Drivers**

OMRON W-series or SMARTSTEP

● **System Configuration**

Example: Accessing a Servo Driver (W-series or SMARTSTEP) Using Smart Active Parts on an NS-series PT Connected Using an NT Link

Note: The Servo Relay Unit has a built-in RS-422A connector for connecting to the FQMI.

DeviceNet communications with the host controller

Data can be exchanged with the host controller using DeviceNet without special programming.

■ **Add a DeviceNet Slave Function**

Remote I/O communications will be possible between the host controller (master) and FQMI (slave) if the FQMI is expanded using an I/O Control Module and the slave function of a CJ-series DeviceNet Unit.

Performance and Specifications

■ General Specifications

Item	Specifications
Insulation resistance	20 MΩ min. between AC external terminals and GR terminal at 500 VDC, see note 1.)
Dielectric strength	2,300 VAC, 50/60 Hz between AC external terminals and GR terminal for 1 min., leakage current: 10 mA max. (See notes 1 and 3.) 720 VAC, 50/60 Hz between DC external terminals and GR terminal for 1 min., leakage current: 10 mA max. (See note 1.)
Noise immunity	Conforms to IEC61000-4-4, 2 kV (power line)
Vibration resistance	Conforms to JIS C0040 (10 to 57 Hz) Acceleration: 9.8 m/s ² (57 to 150 Hz) for 80 min in X, Y, and Z directions (10 sweeps of 8 min = 80 min total)
Shock resistance	Conforms to JIS C0041 147 m/s ² 3 times each in X, Y, and Z directions
Ambient operating temperature	0 to 55°C
Ambient operating humidity	10% to 90% (with no condensation)
Atmosphere	No corrosive gases
Ambient storage temperature	-20 to 75°C
Ground	Less than 100 Ω
Structure	For installation in a control panel
Dimensions (mm)	49 x 90 x 80 mm (W x H x D) excluding cable
Weight	5 kg max. per Module
Safety standards	EC, C-Tick, UL approval pending (See note 4.)

Note 1: Disconnect the LG terminal on the Power Supply Unit from the GR terminal before performing the insulation resistance test. The test may be performed with the LG terminal connected.
Note 2: Values for AC power are at room temperature and a cold start. Values for DC power are for a cold start. A thermostat is used in the inrush current control circuit of the AC power supply. The inrush current may be as high as 15 A for 100 ms. The inrush current value given above may be up to twice the given value when starting at high temperatures or if a hot start is performed immediately after the current is turned OFF for a short period of time because the thermostat element will not be sufficiently cooled.
Note 3: The capacitor used in the inrush current control circuit in the DC power supply, if hot starts are performed after turning OFF the power supply for only a short period of time, may be up to twice the given value because the capacitor will not be discharged.
Note 4: UL-approved products are scheduled for shipment in March 2006.

■ Power Supply Unit Specifications

Item	Specifications
Power Supply Unit model	CJ1W-PA20BR CJ1W-PA20Z
Power supply voltage	100 to 240 VAC (wide range), 50/60 Hz
Allowable power supply voltage and frequency ranges	85 to 264 VAC, 47 to 63 Hz
Power consumption	100 VA max. 50 VA max.
Inrush current (See note 2.)	100 to 120 VAC Input: 15 A max. for 8 ms max. (for cold start at room temperature) 200 to 240 VAC Input: 10 A max. for 8 ms max. (for cold start at room temperature)
Power supply capacity	5.0 A at 5 VDC (including power supplied to Modules) 0.8 A at 24 VDC 0.4 A at 24 VDC 14 W total max.
Power output terminals	None
Switchable capacity	Contact structure: STSP-NO Switching capacity: 2 A at 250 VAC (resistive load) 0.5 A at 120 VAC (inductive load) 2 A at 24 VDC (resistive load) 4 A at 24 VDC (inductive load)
Insulation resistance	20 MΩ min. between AC external terminals and GR terminal at 500 VDC (See note 1.)
Dielectric strength	2,300 VAC, 50/60 Hz between AC external terminals and GR terminal for 1 min., leakage current: 10 mA max. (See note 1.) 1,000 VAC, 50/60 Hz between DC external terminals and GR terminal for 1 min., leakage current: 10 mA max. (See note 1.)
Noise immunity	Conforms to IEC61000-4-4, 2 kV (power line)
Vibration resistance	Conforms to JIS C0040 Amplitude: 0.075 mm (10 to 57 Hz) Acceleration: 9.8 m/s ² (57 to 150 Hz) for 80 min in X, Y, and Z directions (10 sweeps of 8 min = 80 min total)
Shock resistance	Conforms to JIS C0041 147 m/s ² 3 times each in X, Y, and Z directions
Ambient operating temperature	0 to 55°C
Ambient operating humidity	0% to 90% (with no condensation)
Atmosphere	No corrosive gases
Ambient storage temperature	-20 to 75°C
Ground	Less than 100 Ω
Structure	For installation in a control panel
Weight	5 kg max. per Module
Dimensions (mm)	80 x 90 x 66 mm (W x H x D) excluding cable
Safety standards	cULus, EC directives

Item	Specifications
Individual Functions	Serial communications
Coordinator Module	Coordinator Module built-in RS-422A port (servo driver interface, serial gateway, no protocol)
Motion Control Module	Single phase, up-down counting, pulse plus direction input (50 kHz) for 100,000 pulses (50,000 Hz, with phase difference multiplier of 4: 2 MHz) High-speed pulse outputs CW/CCW (1 MHz: line-driver) one-shot pulse output Conversion speed: 40 is/point Resolution: 0.001 to 10 V: 16,000 0 to 5 V: 4,000 1 to 5 V: 4,000 4 to 20 mA: 4,000 Analog inputs Conversion speed: 40 is/point Resolution: -10 to 10 V: 10,000 0 to 10 V, 0 to 5 V, or 1 to 5 V: 4,000

■ Motion Control Module

Item	Description
I/O	Pulse inputs: 2 (for servo with absolute encoder) Pulse outputs: 2 One-shot pulse outputs: 2 General-purpose inputs: 12 General-purpose outputs: 8
Functions	The following operations are possible. • Speed control (fixed speed, acceleration, and deceleration) • Position control (fixed-speed positioning, trapezoidal) • Speed control based on present position (pulse output target value comparison or range comparison) • Electric cam operation (positioning according to position of real or virtual axis) • One-shot pulse outputs (minimum unit: 0.01 ms) • Timing using pulse counter (minimum unit: 0.001 ms) • High-speed counters: Single phase (up-down counting, phase inputs 50/500 Hz), 4-bit shift register (phase inputs 50/500 Hz, with multiplier of 4: 2 MHz) • Bit • Starting/stopping high-speed counters with Counter Start • Measuring change in high-speed counter present value • Measuring high-speed counter frequency

■ Motion Control Module with Analog I/O (FQMI-MMA22)

Item	Description
Pulse inputs	Pulse inputs: 2 (for servo with absolute encoder)
Analog I/O	• Analog inputs: 1 (-10 to 10 V, 0 to 10 V, 0 to 5 V, 1 to 5 V, 4 to 20 mA) • Analog outputs: 2 (-10 to 10 V, 0 to 10 V, 0 to 5 V, and 1 to 5 V), Conversion speed: 40 is/point
General-purpose I/O	General-purpose inputs: 12 General-purpose outputs: 8
Analog outputs	Slope function • Offset gain adjustment • Offset gain adjustment
Analog inputs	• High-speed analog sampling

■ Coordinator Module

Item	Specifications
Input specifications	Inputs: 16 Input voltage: 20.4 to 26.4 V Normal inputs (I ₀): ON response: 0.2 ms max. ON inputs: 100 μs, OFF response: 1 ms max. 8 inputs: common
Output specifications	Outputs: 8 Output form: NPN transistors Switching capacity: 4.5 to 30 VDC, 0.3 A per transistor ON response time: 0.1 ms max. OFF response time: 1 ms max.

■ Motion Control Module

Item	Specifications
Input specifications	Inputs: 12 Input voltage: 20.4 to 26.4 V Interrupt inputs (I ₀): ON response: 20 μs max. OFF response: 0.2 ms max. Normal inputs (I ₀): ON response: 100 μs max. OFF response: 1 ms max.
Output specifications	Outputs: 8 Output form: NPN transistors Switching capacity: 4.5 to 30 VDC, 0.3 A per transistor ON response: 0.1 ms max. OFF response: 1 ms max.

Dimensions

Unit: mm

■ Coordinator Module
FQMI-CM002

■ Power Supply Units
CJ1W-PA202

■ Assembled Dimensions

W = a + 49 + 48 × n + 14.7
a: Width of Power Supply Unit
n: Number of Motion Control Modules connected (4 max.)

■ FQMI Expanded Using CJ-series Units

W = a + 49 + 48 × n + (20 + 31) × m + 14.7
a: Width of Power Supply Unit
n: Number of Motion Control Modules connected (4 max.)
m: Number of CJ-series connected
The maximum value of m + n is 10, as long as the current consumption limit is not exceeded.

■ Motion Control Modules
FQMI-MMP22/MMA22

■ Power Supply Units
CJ1W-PA208R

■ Height with Cables Connected
Height with Peripheral Port and RS-232C Port Connected

■ Servo Relay Unit
XWZB-80J7-1A

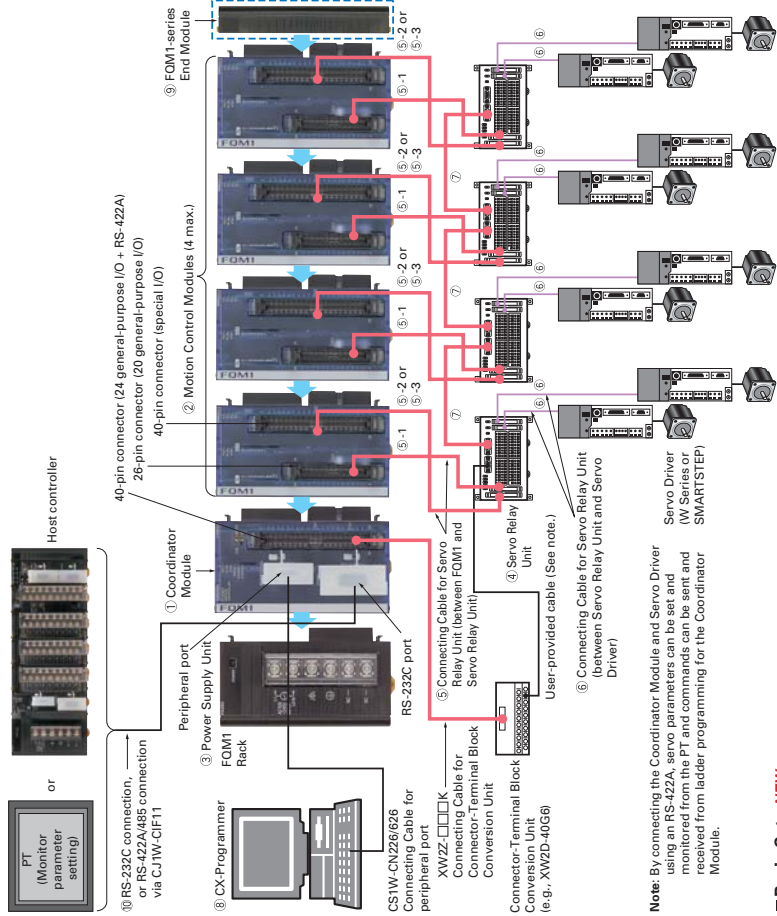

■ End Module
FQMI-TER01

■ I/O Control Module
FQMI-IC101

Ordering Information

Note: By connecting the Coordinator Module and Servo Driver using an RS-422A, servo parameters can be set and monitored from the PT and commands can be sent and received from ladder programming for the Coordinator Module.

Basic Sets **NEW**

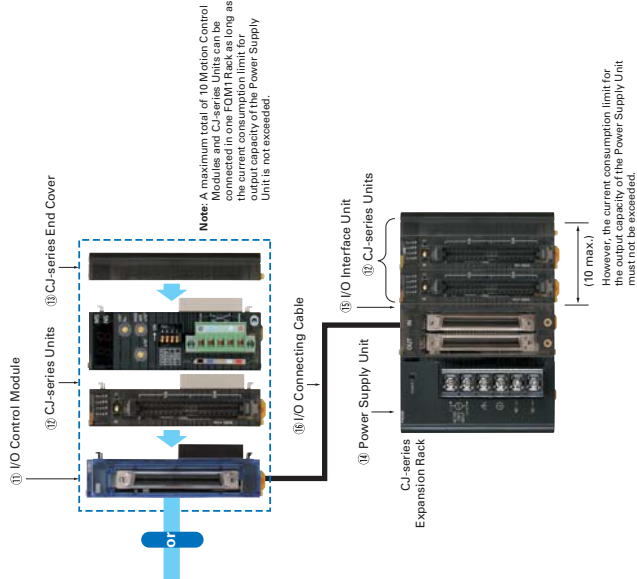

No. in diagram	Name	Specifications	Model	Standards
1	FQMI Pulse Set	A basic set for pulses outputs and 2 axes ③ C.J1W-PA202 + ① FQMI-CH002 + ② FQMI-MMP22 + ③ FQMI-TER01	FQMI-CH002	CE, UL approval (See note 2.)
2	FQMI Analog Set	A basic set for analog outputs and 2 axes ③ C.J1W-PA205R + ① FQMI-CH002 + ② FQMI-MMA22 + ③ FQMI-TER01	FQMI-CH002	CE, UL approval (See note 2.)

Note 1: The I/O Control Module (FQMI-IC101) is not included.
Note 2: UL-approved products are scheduled for shipment in March 2016.

Basic Modules **NEW**

No. in diagram	Name	Specifications	Model	Standards
1	Coordinator Module	Program capacity: 10 Ksteps, DM Area capacity: 32 Kwords, Built-in I/O (16 inputs and 8 outputs), IO Area for C.J-series Basic I/O Unit: 220 bits, Serial PLC Link Area: 1,440 bits, Device Link Area: 9,600 bits, Built-in peripheral ports: RS-232C port, and RS-422 port	FQMI-CH002 (See note 1.)	CE, UL approval pending (See note 2.)
2	Motion Control Modules	Program capacity: 10 Ksteps, DM Area capacity: 32 Kwords, Built-in I/O (12 inputs and 8 outputs), 2 pulse inputs, 1 analog input, 2 analog outputs	FQMI-MMP22	CE, UL approval pending (See note 2.)
3	Power Supply Unit	100 to 240 VAC, output capacity: 2.8 A at 5 VDC, 0.4 A at 24 VDC, total power consumption: 14 W	FQMI-MMA22	CE, UL approval pending (See note 2.)
		100 to 240 VAC (with RUN output), output capacity: 5 A at 5 VDC, 0.8 A at 24 VDC, total power consumption: 25 W	C.J1W-PA202	UL1, CE, N.L.
		100 to 240 VAC, replacement time notification function, no RUN output, output capacity: 5 A at 5 VDC, 0.8 A at 24 VDC, total power consumption: 25 W	C.J1W-PA205R	UL1, CE, N.L.
		100 to 240 VAC, replacement time notification function, no RUN output, output capacity: 5 A at 5 VDC, 0.8 A at 24 VDC, total power consumption: 25 W	C.J1W-PA205C	UL1, CE, N.L.

Note 1: A FQMI-TER01 End Module is included.
Note 2: UL-approved products are scheduled for shipment in March 2016.

Servo Relay Unit and Cables

No. in diagram	Name	Specifications	Model	Standards
4	Servo Relay Unit	FQMI-series Servo Relay Unit with 2 axis connections	XWZB-80J-1A	UC1
5	Connecting Cable for Servo Relay Unit (between FQMI and Servo Relay Unit)	⑤-1 For connecting 25-pin connector on FQMI-MM□22 to Servo Relay Unit	XWZ2-050J-A28	UC1
		⑤-2 For connecting 40-pin connector on FQMI-MMP22 to Servo Relay Unit	XWZ2-100J-A28	UC1
		⑤-3 For connecting 40-pin connector on FQMI-MMA22 to Servo Relay Unit	XWZ2-050J-A30	UC1
6	Connecting Cable for Servo Relay Unit (between Servo Relay Unit and Servo Driver)	For connecting Servo Relay Unit to W-series Servo Driver	XWZ2-100J-B10	—
		For connecting Servo Relay Unit to SMARTSTEP	XWZ2-100J-B10	—
		For connecting Servo Relay Unit to W-series Servo Driver	XWZ2-200J-B10	—
7	RS-422A Communications Cable between Servo Relay Units		XWZ2-200J-B13	—
			XWZ2-300J-C1	—
			XWZ2-300J-C1	—

Support Software

No. in diagram	Name	Specifications	Model	Standards
③	FA Integrated Tool Pack CX-One version 1.1	The CX-One is an integrated tool package that provides programming and debugging software for OMRON PLCs and components. The CX-One includes CX-Programmer, CX-Editor, CX-Designer, SE, Me, NT 4.0 (Service Pack 6), 2000 (Service Pack 3 or higher), or XP. CX-One includes CX-Programmer version 6.1. Refer to the CX-One Catalog (R134) for details.	1 license 3 licenses 10 licenses 30 licenses 50 licenses	— — — — —
	CX-Programmer Ver.6.11 or higher	As previously, the CX-Programmer can also be ordered individually using the following model numbers. Support Software for PLC programming on Windows 98SE, Me, NT 4.0 (Service Pack 6), 2000 (Service Pack 3 or higher), or XP	WS02-CXPCH-E-V60 WS02-CXPCH-E10-V60 WS02-CXPCH-E10-V60	— — —

Site licenses are also available for users that need to use the CX-One on many computers. Ask your OMRON representative for details.

Others

No. in diagram	Name	Specifications	Model	Standards
④	End Module	Connected to the right end of the FQM1 Rack. Provided with the FQM1 Sats and with the FQM1-CM002.	FQM1-TER01	UC1, CE
	DIN Track	Track length: 0.5 m, Height: 7.3 mm Track length: 1 m, Height: 7.3 mm	PPF-SIN PPF-100N PPF-100N2	— — —
	End Plate	Placed on both ends of the Controller on the DIN Track to hold the Controller in place. Two End Plates are provided with the FQM1 Sats and with the FQM1-CM002.	PPF-M	—
	RS-422A Adapter	Converts RS-232C to RS-422A/485.	CJ1W-CF11	UC, CE, N

Expansion Using CJ-series Units

No. in diagram	Name	Specifications	Current consumption (A)	5 V	24 V	Model	Mountable Racks	Standards
①	I/O Control Module	Used when CJ-series Units are connected to the FQM1. A CJ-series Expansion Rack can be connected at the same time.	0.02	—	—	FQM1-IC101 (See note 1.)	○ ×	UL approval (See note 4), CE

Read and Understand this Catalog

Please read and understand this catalog before purchasing the product. Please consult your OMRON representative if you have any questions or comments.

Warranty and Limitations of Liability

WARRANTY

OMRON's exclusive warranty is that the products are free from defects in materials and workmanship for a period of one year (or other period if specified) from date of sale by OMRON.

OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, REGARDING NON-INFRINGEMENT, MERCHANTABILITY, OR FITNESS FOR PARTICULAR PURPOSE OF THE PRODUCTS. ANY BUYER OR USER ACKNOWLEDGES THAT THE BUYER OR USER ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE. OMRON DISCLAIMS ALL OTHER WARRANTIES, EXPRESS OR IMPLIED.

LIMITATIONS OF LIABILITY

OMRON SHALL NOT BE RESPONSIBLE FOR SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED ON CONTRACT, WARRANTY, NEGLIGENCE, OR STRICT LIABILITY.

In no event shall the responsibility of OMRON for any act exceed the individual price of the product on which liability is asserted.

IN NO EVENT SHALL OMRON BE RESPONSIBLE FOR WARRANTY, REPAIR, OR OTHER CLAIMS REGARDING THE PRODUCTS UNLESS OMRON'S ANALYSIS CONFIRMS THAT THE PRODUCTS WERE PROPERLY HANDLED, STORED, INSTALLED, AND MAINTAINED AND NOT SUBJECT TO CONTAMINATION, ABUSE, MISUSE, OR INAPPROPRIATE MODIFICATION OR REPAIR.

Application Considerations

SUITABILITY FOR USE

OMRON shall not be responsible for conformity with any standards, codes, or regulations that apply to the combination of the product in the customer's application or use of the product.

Take all necessary steps to determine the suitability of the product for the systems, machines, and equipment with which it will be used.

Know and observe all prohibitions of use applicable to this product.

NEVER USE THE PRODUCT FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

PROGRAMMABLE PRODUCTS

OMRON shall not be responsible for the user's programming of a programmable product, or any consequence thereof.

Disclaimers

CHANGE IN SPECIFICATIONS

Product specifications and accessories may be changed at any time based on improvements and other reasons. Consult with your OMRON representative at any time to confirm actual specifications of purchased product.

DIMENSIONS AND WEIGHTS

Dimensions and weights are nominal and are not to be used for manufacturing purposes, even when tolerances are shown.

PERFORMANCE DATA

Performance data given in this catalog is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of OMRON's test conditions, and the users must correlate it to actual application requirements. Actual performance is subject to the OMRON Warranty and Limitations of Liability.
